WHAT IS CLAIMED IS:

- 1. A method of performing a clean check on a gearbox, said method comprising the steps of:
- (a) flushing an oil-based fluid through said gearbox and then through a filter;
- (b) weighing said filter to determine the weight of contaminants collected in said filter; and
- (c) comparing said contaminant weight to a predetermined level, wherein said gearbox is acceptable if said contaminant weight is below said predetermined level.
- 2. The method of claim 1 further comprising the step of soaking said filter in a solvent prior to said step of weighing said filter.
- 3. The method of claim 2 wherein said step of soaking said filter in a solvent includes soaking said filter for about 30 minutes or more.
- 4. The method of claim 1 further comprising the steps of soaking said filter in a first solvent prior to said step of weighing said filter and then soaking said filter in a second solvent.
- 5. The method of claim 4 wherein said first solvent is mineral spirits and said second solvent is isopropyl alcohol.
- The method of claim 1 further comprising the step of flushing said oil-based fluid through another filter prior to flushing said oil-based fluid through said gearbox.
- 7. The method of claim 1 wherein said filter is a 3 micron collection filter.
 - 8. The method of claim 1 wherein said oil-based fluid is MIL-L-

- 9. The method of claim 1 wherein said step of flushing an oil-based fluid through said gearbox and then said filter includes flushing about 50 gallons of said oil-based fluid through said gearbox at about 40 pounds per square inch.
- 10. The method of claim 1 wherein steps (a)-(c) are repeated if said contaminant weight is above said predetermined level.
 - 11. The method of claim 1 wherein said gearbox is a finally assembled, closed gearbox.
 - 12. A method of performing a clean check on a finally assembled, closed gearbox, said method comprising the steps of:
 - (a) flushing an oil-based fluid through said gearbox and then through a first filter;
 - (b) soaking said first filter in a solvent;
 - (c) passing said solvent through a second filter;
- (d) weighing said first and second filters to determine the weight of contaminants collected therein; and
- (e) comparing said contaminant weight to a predetermined level, wherein said gearbox is acceptable if said contaminant weight is below said predetermined level.
- 13. The method of claim 12 wherein said step of soaking said first filter in a solvent includes soaking said first filter for about 30 minutes or more.
 - 14. The method of claim 12 further comprising the steps of:
 soaking said first filter in a second solvent, subsequently to said step of
 soaking said first filter in said first-mentioned solvent; and
 passing said second solvent through said second filter.
- 25
 15. The method of claim 14 wherein said first-mentioned solvent is mineral spirits and said second solvent is isopropyl alcohol.

- 16. The method of claim 12 wherein said first and second filters are 3 micron collection filters.
- The method of claim 12 wherein said oil-based fluid is MIL-L-17. 23699 oil.
- 18. The method of claim 12 wherein said step of flushing an oilbased fluid through said gearbox and then said first filter includes flushing about 50 gallons of said oil-based fluid through said gearbox at about 40 pounds per square

The method of claim 12 further comprising the step of flushing said oil-based fluid through another filter prior to flushing said oil-based fluid through

- The method of claim 12 wherein steps (a)-(e) are repeated if 20. said contaminant weight is above said predetermined level.
- A system for performing a clean check on a gearbox having an 21. inlet and an outlet, said system comprising:

a source of an oil-based fluid fluidly connected to said gearbox inlet;

a filter fluidly connected to said gearbox outlet; and

means for causing said oil-based fluid to flow through said gearbox and

20

said filter.

- 22. The system of claim 21 wherein said means for causing said oilbased fluid to flow through said gearbox and said fifter is a pump.
- 23. The system of claim 21 wherein said filter is a 3 micron collection filter.
- The system of claim 21 wherein said oil-based fluid is MIL-L-24. 25 23699 oil.

5

- The system of claim 21 further comprising means for soaking said filter in a solvent.
 - The system of claim 25 wherein said solvent is mineral spirits. 26.
- 27. The system of claim 25 wherein said solvent is isopropyl alcohol,
- The system of claim 25 further comprising a second filter for 28, passing said solvent through.
- The system of claim 21 further comprising a second filter fluidly 29. connected between said source of an oil-based flyid and said gearbox inlet.

10

5

The system of claim 29 wherein said second filter is a 3 micron collection filter.
